

Description

IP KVM Switch

MODEL : **KF101P**

USB **VGA** **IP_{KVM}**

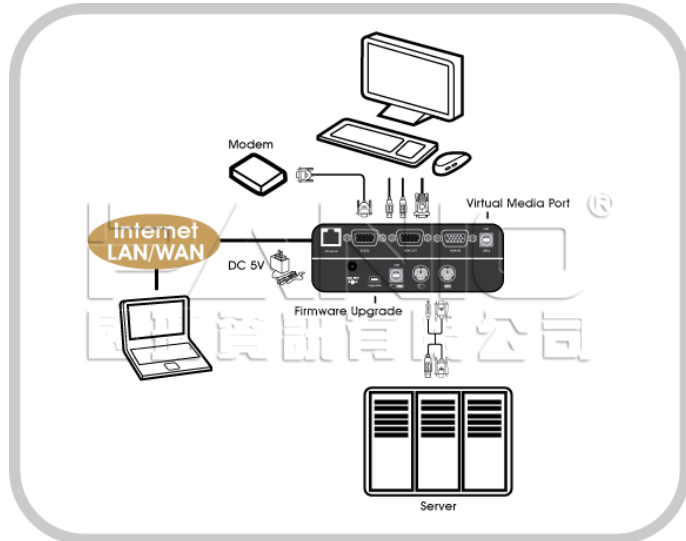

Single Port Combo KVM over IP

Made in Taiwan

The KVM-over-IP redirects local keyboard, mouse and video data to a remote administration console. It allows you to control one or many computers locally at the server site or remotely via the internet using a standard browser. You can securely gain BIOS level access to systems for maintenance, support, or failure recovery over the internet. Communication is secure via SSL authentication and encryption. Use in conjunction with a KVM switch for multiple-server access.

Features **Diagram**

- Manage servers around the world.
- Remote KVM access over IP or analog telephone line (modem needed).
- Full control under complying with OS, BIOS level, during boot, or at Blue Screens.
- Remote mass storage control and redirection.
- Remote control over Java-Enabled Browsers.
- No additional software needed on client console side.
- Secure access through certificate authentication and data encryption.
- 256-bit SSL encryption of all transmitted data.
- Auto-optimize the frame rate and video quality according to the bandwidth availability.
- Automatically senses video resolution for best possible screen capture.
- High-performance mouse tracking and synchronization.
- Firmware updated via web interface.
- Made in Taiwan.
