

# How to Update Firmware through Web Interface

1. Set IP address to 169.254.111.111 subnet mask: 255.255.0.0 ( [if you can't browse device ip](#) )
2. Run Bonjour Browser.exe to seek target device at Web Server (HTTP) icon.

3. Double click the target device in Bonjour browser. And it will get in device webUI.
4. Select “System” -> “Update Firmware:”.
5. Click the “Choose File” button.
6. Select the firmware file for web update. The firmware files are normally named webfwh.bin for host and webfwc.bin for client.
7. Press “Upload” button.
8. Web update process will start. Device will go to link off state and the firmware update process may takes a few minutes.
